
ICP PILES

HIGH PERFORMANCE
PRETENSIONED SPUN

HIGH STRENGTH CONCRETE PILES

WE DELIVER

THE MALAYSIA BOOK of RECORDS

LONGEST SINGLE LENGTH
SPUN CONCRETE PILE 2023

An IJM Company

Introduction

INDUSTRIAL CONCRETE PRODUCTS SDN BHD (ICP) is the first commercial manufacturer of HIGH PERFORMANCE PRETENSIONED SPUN HIGH STRENGTH CONCRETE PILES (ICP PHC PILES) in Malaysia. Presently, ICP is the largest manufacturer in South East Asia. ICP Piles are circular hollow in cross-section and are manufactured in sizes ranging from diameter 250mm to 1,200mm with lengths varying from 6m to 54m in single piece. For large diameter piles, ICP has pile joining facility which is able to pre-join the piles up to 90m.

ICP Piles are exported to Brunei, Singapore, Bangladesh, Sri Lanka, the Middle East, Indonesia, Pakistan, Philippines, Vietnam, Myanmar, USA, Canada, New Zealand, Maldives and Samoa.

LOCATION OF ICP FACTORIES IN MALAYSIA

AREAS OF APPLICATION

- Bridges
- Piled Embankments
- Building Foundations
  - High rise, school and government projects.
- Marine Structures
- Civil Engineering Works
- Heavy Industries

PRODUCT ATTRIBUTES

- Steam curing enables faster production rate and delivery to project sites.
- Can be customized to suit project requirements.
- Spinning process results in more durable concrete with high resistance to corrosion.
- High strength concrete up to grade 100 enables piles to be driven through hard strata.
- Can be manufactured up to diameter 1200mm and a maximum single length of 54 metres. Big diameter piles can also be joined in factory up to the length of 90m.
- Environmental friendly installation by hydraulic jacking equipment which is free of noise, air pollution and vibration.
- Prestressed concrete provides higher bending moment capacity compared to conventional reinforced concrete piles.

STANDARDS

ICP PHC Piles comply with MS 1314:Part 4:2004 and also generally complies with JIS A 5337:1987. ICP PHC Piles are modified to suit BS 8004:1986 – Foundations and BS 8110:1997 – Structural Use of Concrete. Concrete complies with SS EN 206 : 2014 - Specification of Concrete.

MATERIALS

Aggregates – Coarse aggregates shall be 20mm granite. Fine aggregates shall be clean river sand or washed mining sand.
Cement – Portland cement complies with MS 522:2007.
Prestressing Steel – High frequency induction heat treated bars manufactured to JIS G 3137:1994 or equivalent.
Spiral Wire – Hard drawn wire.

CONCRETE STRENGTH

Minimum concrete cube strength:

at transfer of prestress		30N/mm^2
at 28 days	- Grade 80 pile	80N/mm^2
	- Grade 90 pile	90N/mm^2
	- Grade 100 pile	100N/mm^2

JOINT

The joint is designed to have the same performance as the main body particulary in respect of bending strength. All ICP PHC Piles have steel extension plates for splicing.

LIFTING POINTS

For piles up to 12m length, piles shall be lifted by using steel hooks at both ends. For piles exceeding 12m, piles shall be lifted by wrapping wire ropes around the piles at the marked lifting points.

PILE SHOE

All ICP PHC piles will be supplied either open ended, with a flat shoe or with other type of shoes such as x-pointed shoe, rock shoe and pipe shoe.

CURING

After casting, the piles are steam cured. When the concrete reaches the specified transfer strength, the piles are demoulded, marked and checked for quality. The piles can normally be transported and driven after three days from the date of casting, or when the cube strength reaches 70 N/mm^2.

IDENTIFICATION

All ICP PHC Piles have the typical markings as below:

Company's Initial	ICP
Malaysian Standard	MS1314: Part 4
Pile Size and Class	60B800
Date of Cast (yy/mm/dd)	190102
Serial No & Factory Code	001L3
Pile Length and Type	12E

Logo as Trademark

Other markings:
S - Starter (Flat Shoe/X-Pointed Shoe/ Rock Shoe/Pipe Shoe)
E - Extension
B8 - Class B, Grade 80
B9 - Class B, Grade 90
BX - Class B, Grade 100

STANDARD LENGTHS

ICP PHC Piles are available in lengths of 6m to 54m subject to certain limitations.

DELIVERY

ICP Standard Piles are normally available ex-stock. Custom made piles usually takes two to three weeks from date of confirmed order.

TECHNICAL DATA

Technical data of our standard piles are given in the tables on the next page. Please note that the axial loads represent the structural capacities of the piles. Actual working load depends on the soil conditions and the pile slenderness ratio. Appropriate reduction of axial loads should be applied for:

a) marine structures;
b) piles subjected to bending;
c) high upstand;
d) piles driven through very poor top stratum;
e) raking piles, etc.

DEFINITIONS

ICP PHC Piles: High Performance Pretensioned Spun High Strength Concrete Piles

FORMULA FOR AXIAL LOAD

Based on BS 8004: 1986, the maximum allowable axial stress that may be applied to a pile acting as a short strut should be one quarter of specified works cube strength at 28 days less the prestress after losses.

$$N = f_{ca} \times A$$
$$= 1/4 (f_{cu} - f_{pe}) \times A$$

Where,

N = maximum allowable axial load

A = cross section area of concrete f_{ca}

f_{ca} = permissible compressive strength of concrete

f_{cu} = specified compressive strength of concrete

f_{pe} = effective prestress in concrete

STANDARD GRADE 90 PILES

CLASS A (EFFECTIVE PRESTRESS ≥ 4.0 N/mm²)

Nominal Diameter	Nominal Thickness	Single Length	Nominal Weight	Prestressing Bar		Area of Concrete	Section Modulus	Bending Moment		Recommended Max Structural Axial Working Load (For a short strut)	Effective Prestress

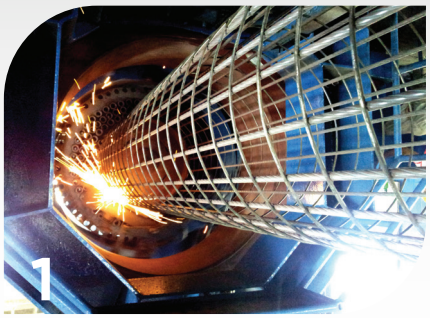
As the PC bars are bonded with concrete, ICP Piles may be cut off at any point. The piles need not be stripped down to expose the bars and can be bonded to the pile cap as shown in the above sketch. If the piles are not subjected to tensile loads, the recommended H.T. bars are considered adequate.

Manufacturing Process

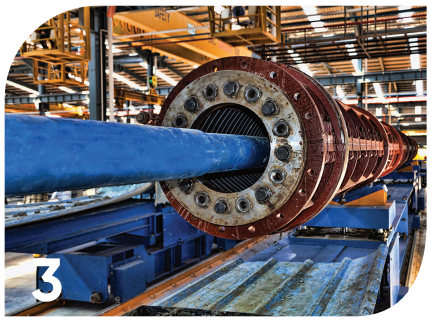


CAGE MAKING/MOULD SETTING

PC bars in coil form are straightened and cut to correct lengths. The ends are warm-headed to form button heads. The bars are passed through the cage forming machine where spiral wire is automatically spot-welded at the correct spacings. End plates are fitted to the cage. The whole cage is then placed onto the bottom half mould.

STRESSING

The PC bars are stressed against the mould through a central shaft and stressing plate. The stressing is being carried out in a single operation. This ensures uniformity of stress in all the PC bars and hence straightness of the pile.



CONCRETE FEEDING

Concrete from the computerised batching plant is discharged into a feeding hopper. The concrete is then fed into the mould by pumping.*

PILE SPINNING

The pile is then compacted by the centrifugal spinning machine. Spinning process squeezes out excess water, thus increases the concrete strength.

STEAM CURING

The pile is sent to the steam tank for rapid curing process in order to achieve the required transfer strength for early demoulding.

DEMOULDING

After demoulding, final QC inspection is carried out according to the quality manual specification.

*Note: For open concrete feeding, concrete is fed into the mould before stressing.

Project Photos

ICP Piles have been used extensively as foundation piles for power stations, highrise buildings, civil engineering works, bridges, marine structures, harbours, schools, government projects, etc. The piles are widely used in local and overseas construction industry, namely Brunei, Singapore, Bangladesh, Sri Lanka, the Middle East, Indonesia, Pakistan, Philippines, Vietnam, Myanmar, USA, Canada, New Zealand, Maldives and Samoa.

PRECAST CONCRETE PILES
- Precast Pretensioned Spun Concrete Piles

Tarikh Mula Berkuatkuasa : 28-05-2022
Tarikh Tamat Tempoh Perakuan : 27-05-2023

Perakuan ini hendaklah diperbaharui selewat-lewatnya 30 hari sebelum tarikh tamat tempoh perakuan

Nota: Perakuan dikeluarkan setelah Lembaga menjalankan pemeriksaan dan pengesahan ke atas kilang dan produk-produk yang terkandung di dalam Pensijilan Produk (Product Certification) yang dikeluarkan oleh Badan Pensijilan yang diiktiraf. Pihak pengeluar/pengilang adalah bertanggungjawab untuk memastikan Pensijilan Produk (Product Certificate) sentiasa dalam tempoh sahlaku.
